

Installation of Geosolve software

These instructions relate to the installation of **Wallap**, **Slope** and **Gwall**. In the following instructions we will simply refer to them as "**program**".

You will have been supplied with a CD and a USB key.

Stand alone installations (five digit Serial Numbers beginning with **9**) have a green USB key like this:

1. Do not insert the USB key into the USB port until **after** the software installation process is complete.
2. Run Setup.exe from the CD
You might see the error message
This application has failed to start because framedyn.dll was not found
Ignore it.
3. Scroll through the Licence Agreement. Click **Accept**, then click **Next**
4. Scroll through the Release Notes and click **Next**
5. You now see the **Skip Search** box.

(a) If you tick the box then Setup will install the **program** to the folder of your choice without regard to the presence of existing versions of the **program**. This option is appropriate if

- You know that there are no existing installations
- or**
- You know exactly which folder you want to install to
- or**
- You are happy to accept the default destination folder

(b) If you do not tick the box then Setup will search for existing installations. This can help to ensure that you:

- Locate older versions on your hard disk or server
- Install updates to the correct existing folder
- Avoid overwriting older installations which you wish to preserve.

On **large systems** the search can take a **very long time**

6. Click **Next**
7. If you did **not** tick the **Skip Search** box then there will be a delay while the Setup Wizard searches for existing installations i.e. installations with the same Serial Number. When the search is complete you will be offered the choice of installing to one of the existing valid folders (if found). You will also be able to view a list of folders to which you may **not** install because they contain a copy of the **program** with a different serial number.
8. **Destination folder**
You can install to the default Destination Folder, usually **C:\Program Files\program** but you may wish to install to a new folder directly off the root of C: e.g. **C:\program**.
9. Click **Next** to confirm the creation of a **program** icon in the Start Menu
10. Click **Next** again to confirm the creation of a **program** shortcut on your Desktop.
11. At the message "**program** has been successfully installed" click **Finish**.

12. Complete the installation with the following procedure:

Five digit Serial Number begins with a " 9 " (green USB key):

Insert the USB key in a USB port. You may see a message "New hardware found". If any options are offered then select "Install automatically".

This Driver Installer is suitable for all 32- and 64-bit machines

<http://www.geosolve.co.uk/files/Rockey4.exe>

You might need to reboot the machine before running the software.

If you get an error message please consult the Installation Trouble Shooting Guide at

www.geosolve.co.uk/faq.htm

If you see the error "KECHK32 was not loaded" there is a problem with your copy of KECHK32.DLL. It may be missing, corrupt copy protected. Please download the latest file from the link below and paste it into your WALLAP folder allowing it to overwrite any existing file of the same name. Check that it isn't read only or copy protected.
